Education

The Hong Kong University of Science and Technology **Hong Kong**
M.Phil., Department of Computer Science and Engineering *Sept. 2019 – Nov. 2021*
Supervisor: Prof. Tong Zhang
Thesis Title: Neural Architecture Search for Heterogeneous Graph Neural Networks

Tsinghua University **Beijing**
B.Eng., Department of Computer Science and Technology *Aug. 2015 – July 2019*

Publications

1. **Yuhui Ding**, Quanming Yao, Huan Zhao, Tong Zhang. DiffMG: Differentiable Meta Graph Search for Heterogeneous Graph Neural Networks. *KDD*, 2021.
2. Zhengxiao Du, Jie Tang, **Yuhui Ding**. POLAR++: Active One-shot Personalized Article Recommendation. *IEEE Transactions on Knowledge and Data Engineering* (*TKDE*), 2019.
3. Changjun Fan, Li Zeng, **Yuhui Ding**, Muhao Chen, Yizhou Sun, Zhong Liu. Learning to Identify High Betweenness Centrality Nodes from Scratch: A Novel Graph Neural Network Approach. *CIKM*, 2019.
4. **Yuhui Ding**, Shanshan Li, Jinghan Liu, Xiaojun Wu. DCLab: A Web-based System for Digital Logic Experiment Teaching. *IEEE Frontiers in Education Conference* (*FIE*), 2018.
5. Zhengxiao Du, Jie Tang, **Yuhui Ding**. POLAR: Attention-based CNN for One-shot Personalized Article Recommendation. *ECML-PKDD*, 2018.

Research Experience

The Hong Kong University of Science and Technology
Research assistant, supervised by Prof. Tong Zhang *Sept. 2019 – Present*

- Proposed a neural architecture search method for GNNs to automatically utilize task-related semantic information encoded in heterogeneous information networks. The proposed method eliminated the need for handcrafted rules, required little search time, and achieved better performance than previous heterogeneous GNNs. One first-author paper has been accepted by KDD 2021 Research Track.
- Proposed a stochastic bi-level optimization algorithm based on implicit differentiation and applied it to tuning L_2 regularization.

Tsinghua University
Research assistant, supervised by Prof. Jie Tang *Nov. 2016 – June 2018*
Contributed to personalized article recommendation via one-shot learning and active learning. Our work has been published in ECML-PKDD 2018 and TKDE, and the model has been deployed on AMiner.

University of California, Los Angeles
Research assistant, supervised by Prof. Yizhou Sun *July 2018 – Oct. 2018*
Contributed to efficient approximation of betweenness centrality with graph neural networks. Our work has been published in CIKM 2019.

Work Experience

Microsoft Research Asia
Intern *Summer 2021*
Contributed to open-source AutoML toolkit NNI and received a "Stars of Tomorrow" award of excellence.

4Paradigm Inc.
Part-time intern *Oct. 2019 – Feb. 2021*
Worked on NAS for GNNs.

Selected Course Projects

DCLab
Tsinghua University
DCLab is a software system for online digital logic experiment teaching. It supports circuit diagrams, VHDL programming, simulation, etc. I led a group of four to develop it using JavaScript. Functions of DCLab have been used in the digital logic circuit course, and a paper describing the system has been published in proceedings of FIE 2018 (a top conference focusing on innovations related to engineering education). On my website there is a demo showing a counter built with 74LS chips.

Awards

Postgraduate Studentship
The Hong Kong University of Science and Technology *2019 – 2021*

Outstanding Graduate
Department of Computer Science and Technology, Tsinghua University *2019*

Innovation Excellence
Tsinghua University *2017*
Only 4 in the whole class of more than 150 students.

Third Prize
35th "Challenge Cup" (national extracurricular competition of science and technology) *2017*
A prototype system that could automatically sort waste based on a CNN and a Raspberry Pi.

Academic Excellence
Tsinghua University *2016*
Top 10% of more than 140 students.

Service

Reviewer for NeurIPS, ICLR

Teaching

TA at HKUST for Computational Geometry (PG), Design and Analysis of Algorithms (UG)

Skills

Programming Languages: Python, C/C++, MATLAB, Java, JavaScript
Deep Learning: TensorFlow, PyTorch
